

Cloud Services

Managed Services Datasheet

“Any sufficiently advanced technology is indistinguishable from magic.”

– Arthur C. Clarke

Advantages of Cloud Computing

- Instead of having to invest heavily in data centers and servers before you know how you’re going to use them, you can pay only when you consume computing resources, and pay only for how much you consume.
- Eliminate guessing on your infrastructure capacity needs. When you make a capacity decision prior to deploying an application, you often end up either sitting on expensive idle resources or dealing with limited capacity. With cloud computing, these problems go away. You can access as much or as little capacity as you need, and scale up and down as required with only a few minutes’ notice.
- Focus on projects that differentiate your business, not the infrastructure. Cloud computing lets you focus on your core business, rather than on the heavy lifting of racking, stacking, and powering servers

Cloud Services

Cloud Management

When it comes to managing your cloud services, companies can have a lot of users, licenses and tenants to manage. This can become overwhelming to manage internally. The team at iSquared do this for many of our customers and can help manage the workload and complexities.

Cloud Optimization

The shape of your business is changing daily and with that comes the possibility of paying for things your company is not using. iSquared keep a constant eye on your cloud infrastructure to find cost savings and to ensure you are getting the best value for money that you can.

Cloud Data Protection

A common misconception is that because your data is saved “in the cloud” it is completely safe. Unfortunately, this is not the case and disasters do happen. iSquared ensures that backups of your company’s data are created, maintained and secured and are ready to be used in the unfortunate event your live data is lost.

Multi-Cloud Billing Services

iSquared are committed to ensuring their customers are getting the best deals they can. Our technical team monitor end users to ensure there is not an oversupply of anything. Our back-office team keep our technical team in check to ensure that our clients get the best deals and specials available to unlock cost savings.

“The road to Cloud is paved with good intentions.”

Rapidly scaling infrastructure and application capabilities can unlock immediate business value. Managing the risks and cashflow to harness these benefits can be somewhat more complex.

Cloud Management

Tenant Management

Losing track of cloud accounts costs money and present security risks. Enterprises embarking on their cloud journey may start with a small number of projects and accounts however putting thought into proper cloud tenant management services can save a great deal of effort and money in later stages when your business grows and gets more complex.

Tenant Optimization

The beauty of Cloud Consumption is it is like a utility and you pay for what you use. Therefore, looking for opportunities to optimize usage can lead to material cost savings.

Multi-Cloud Billing Services

As cloud delivery becomes more pervasive more and more cloud services become available, billing cycles, and reporting period can be tricky to manage. So, having a partner to navigate the complexity can not only manage the cashflow risks but also identify opportunities for cost savings.

IN SUMMARY

Competitive advantage can be achieved by leveraging Cloud Services, but it is complex and requires deep domain expertise. For best results partner with partners who have experience in building, running, and managing Cloud and on premises workloads. iSquared has nearly two decades of experience and continue to partner with leading Cloud Providers like Microsoft, AWS, Huawei, Mimecast to name a few. Our teams are ready to assist and guide you on your journey to the Cloud.

Cloud Data Protection

Backup as a Service

The vast majority of cloud service providers offer an availability SLA which does not include backups. Therefore, the need to have a backup solution in place to backup your Cloud data is very important. iSquared offer a variety of on-premises or cloud based backup solutions to suit your needs. Our team of professionals can manage this process end to end or part thereof.

Disaster Recovery as a Service

Disaster recovery principles do not change in the Cloud. It is important to understand the capabilities and limitations of the Cloud Providers environment. Equally important is to map this back to the customer's recovery objectives and the timeframe expectations. iSquared offer a fully managed disaster recovery service from the setup, orchestration and management during a disaster. Our team of professional can reduce the stress that comes with a disaster on premises or in the cloud.

Cloud Security

Identity Management

As the borders of your environment blur within cloud consumption, the risk of securities rise. It is important to have an identity management solution that integrates with multiple cloud providers. Tools like this help security teams lock down sensitive information that could cause a security compliance incident.

Multi- Factor Authentication

Multi-Factor Authentication (MFA) has become mainstream in banking apps. These same tools are readily available and can be easily setup and configured to provide a second level of protection against identity theft. Our team can assist in selecting, implementing and managing MFA tools.

Vulnerability Management

Modern vulnerability management tools with built in artificial intelligence looking for anomalous behavior can assist security professionals to reduce risk.
