

iSquared Technologies

Company Overview

"We are all about mutually beneficial partnerships with a focus on win/win."

James Beaumont CEO

OVER CAPITALIZATION

The over capitalization of IT infrastructures has left many organisations with an abundance of computing power that is underutilised, with disparate systems running on unstructured architectures.

COST CONTAINMENT

With cost containment a priority in the current economy, enterprises need to consolidate and optimise their existing systems. The challenge is that most enterprises don't have the specialised skills required to deal with what is an extremely complex environment.

SKILLS DEFICIT

Not only are these skills expensive, they are also increasingly difficult to find, attract and retain. Not surprisingly, outsourcing has become an attractive option for managers who appreciate the critical role IT plays in improving operational and business process efficiencies.

Managed Services

DATACENTER SERVICES

Architectural designs and turn-key implementation of virtual and private datacenters, including ongoing maintenance and support of all elements within a modern datacenter.

CLOUD SERVICES

The rapid adoption of cloud-based services has seen a sharp rise in the number of companies operating in a cloud-ready fashion, despite the complexities of this environment. iSquared has a division specifically focused on click-n-consume online services. This is supplemented by management, optimization, data protection and multi-tenant billing services.

DISASTER RECOVERY SERVICE

The ability to build resilient IT services is complex and requires an agile approach to continuous improvement. This approach will ensure your technology partner is ready to react when disaster strikes. iSquared has the facilities, technology and human capital to build, run and manage modern continuity services.

END USER SUPPORT SERVICES

There is significant focus on CX or customer experience, which is ultimately delivered by the technology and people you expose your customers to. This makes the focus on employee experience very important. Providing access to a responsive, tech-savvy team of professionals to support your employees will make them more effective.

BE GOOD AT YOUR CORE BUSINESS. TECHNOLOGY IS OUR CORE BUSINESS.

By delegating the management of your IT infrastructure to dedicated specialists, you can potentially cut operating expenses and free up resources to focus on the areas where their competencies can improve the revenue streams of the business.

OUR STORY

FOUNDED IN 2006

We offer a big picture approach to problem solving in your business environment. Our team of business analysts, ICT professionals and dedicated technicians deliver a holistic and balanced ICT solution to SME's and corporates throughout South Africa. We focus on your strategic objectives to ensure that the role of information is integrated into the short, medium and long-term outlook of your company.

OUR APPROACH

We aim to integrate technology within your existing business processes in a value-adding and support role in order to achieve your strategic objectives. We also pay attention to the performance delivery of your employees to ensure that adequate management and development systems are in place.

Based on hands-on experience in the field over the last 14 years and inspired by current trends in the academic and development environments, we have created an implementation model that allows us to deliver outcome-critical information in a format you'll find useful - not a format dictated by an "IT department".

SUMMARY

Whatever level of IT outsourcing an organisation chooses, the role that iSquared Technologies plays is that of centralised management. In this role, we provide customers with a comprehensive range of generic and specialised IT services that cater for a full range of business requirements. We can deliver services and solutions, independently or with partners, across the full value chain from infrastructure and applications to business process services and solutions. iSquared Technologies is certified and delivers infrastructure solutions within the ITIL framework, which is the internationally recognised best practice IT management framework.

OUR PEOPLE

TECHNOLOGISTS

Our people are passionate about technology and solving complex problems. We have a formidable team of technologists skilled in turn-key ICT projects. They are supported by a support services team with seasoned technologist leading each team. Our mentorship and internship program ensures a constant pipeline of young South Africans ready for the world of enterprise IT.

EVANGELISTS

The ever-changing world of technology requires skilled marketers to articulate the business value to business owners. Our team of sales and marketing professionals enable our customers to understand the tools we need to manage your environment. They assist in developing partnerships with global ICT vendors and suppliers to lower the cost of acquisition.

OPERATIONS SPECIALISTS

We are passionate about processes and works instructions. We constantly seek ways to improve and optimize our own operations and upstream suppliers so we can source and deliver 3rd party products and services.
